DESCRIPTION

Damen designs fingerpiers with travelifts (or syncrolift) as a system for lifting boats and ships out of the water for maintenance work or repair. The vessel is maneuvered over a submerged cradle, which is then lifted by a set of synchronized hoists or winches.

The vessel can be worked upon in place, or it can be moved inland so the travelift can be freed for other use. Herewith we can optimize the use of your yard. The whole plot can be utilized for a maximum amount of berthing places to extend your sales market and threshold level.
